

Chapter 0 - Introduction.

HTML - Hyper Text Markup Language.

HTML is the language of the web. It is used to create websites.

We use HTML tags to define look & feel of a website.

With understanding of these tags and how to about but then together, we can create beautiful website easily!

Then Why CSS & JavaScript

HTML is used for defining layout of a page - A basebone page structure

CSS is used to add styling to that basebone page created using HTML

JavaScript is used to program Logic for the page layout eg. What happens when a user hovers on a text, when to hide or show element etc.

A Beautiful analogy.

HTML = Car body (only metal)

CSS = Car paint, decoration, etc

JavaScript = Car engine + Interior logic

We start learning how to build beautiful layout in this course.

Installing VS Code.

We can use any text editors of our choice here I am using VS code because it is light weight, open source & from Microsoft.

Go to Google, type VS code & Install it.

Note :- You can write HTML even in Notepad : Text editors like VS code just make these things easier.
